When coughing & sneezing cover mouth & nose with your flexed elbow or a tissue – throw the tissue away immediately and wash your hands.

Avoid close contact with anyone who has fever and cough.

When visiting live markets (animal markets) in areas with reported cases of nCoV, avoid direct unprotected contact with live animals & surfaces in contact with animals.

Avoid consuming raw or undercooked animal products. Handle raw meat, milk or animal organs with care, to avoid cross-contamination, as per good food safety practices.

At present, there is no evidence that companion animals/pets such as dogs or cats can be infected with the new coronavirus. However, it is always a good idea to wash your hands with soap and water after contact with pets. This protects you against various common bacteria such as E.coli and Salmonella that can pass between pets and humans.

As the novel coronavirus can be spread from person to person, it is important to wash your hands with soap and water or use alcohol-based hand sanitiser when you return home or after being in a public place.

As per the World Health Organisation’s (WHO) report, globally there are 14,557 confirmed cases of nCoV, majority of which are in China. Overall, 24 countries have confirmed cases of the infection. 305 cases of nCoV have been fatal. There are three cases of Coronavirus in India, all of which have been reported in Kerala, where nearly 2,000 people are under observation in hospitals and homes.

As per WHO, the 2019-nCoV outbreak and response have been accompanied by a massive ‘infodemic’ – an over-abundance of information – some accurate and some not – making it hard for people to find trustworthy sources and reliable guidance when needed. Hence, it is critical to avoid sharing information which does not originate from a trustworthy source and rely on information shared by WHO and Ministry of Health and Family Welfare, Government of India.
